

AI Agent Tech Stack Guide — Next.js + Convex + Clerk + Tailwind + ShadCN + Vercel

Overview

This document explains how to operate within the Ultimate Money-Making Tech Stack, a modern framework designed for rapid SaaS development.

Stack:

- Next.js: frontend + backend
- Convex: realtime database + backend logic
- Clerk: auth + billing
- Tailwind + ShadCN: UI
- Vercel: hosting

Project Structure:

app/, components/, convex/, styles/, etc.

Next.js:

Routing via app/. Use server components by default.

Convex:

Type-safe backend with queries and mutations in convex/*.ts.

Clerk:

Handles auth, user management, and billing.

Billing:

No Stripe code needed. Use Clerk billing components.

UI:

Use Tailwind for styling and ShadCN for components.

Deployment:

Deploy on Vercel with environment variables.

AI Agent Rules:

- Prefer TypeScript
- Don't write custom OAuth or Stripe code
- Keep backend logic in convex/
- Use server components
- Use ShadCN components for UI
